### **DETAILED ACTION**

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

#### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-7 are vague and indefinite because in claim 1 for example, the term analogue or analogues is used which is interpreted as modified forms of an unmodified nucleotide, but it is unclear what are the metes and bounds of the modification.

Claim 7 is vague and indefinite because it is unclear how the nucleotide is bring into contact with the metal film. It is unclear how the nucleotide or analogues is fixed to the metal.

#### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-7 are rejected under 35 U.S.C. § 102(b) as being anticipated by Bamdad et al. (5,620,850).

Bamdad et al. disclose an article suitable for determination of analytes. The article can be a biosensor element such as a chip which can be used in methods involving determining a biological molecule and in particular a molecule that is a binding partner of a nucleic acid strand. The element comprises a substrate, a metal film, and a self assembled monolayer of a species X-R-NA-NAB, where X represents a functional group that adheres to the surface, R represents a spacer moiety (col. 10), NA represents a nucleic acid (Col. 5-10). Preferred surface materials include metals such as silver and copper (col. 10). The immobilization of species is carried in a fluid medium which is viewed to be inclusive of instant claim 7 (col. 4).

5. No claim is allowed.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jezia Riley whose telephone number is 703-305-6855. The examiner can normally be reached on 9:30AM - 5:00PM.
